DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-23 and 27-35, drawn to a paper pick-up device of an image forming apparatus, classified in class 271, subclass 117.

II. Claims 24-26, drawn to a method of picking up paper sheets having different strengths in an image forming apparatus, classified in class 271, subclass 110.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process and apparatus for its practice.

The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced by an apparatus that does not have a friction resistance plate inclined by a predetermined angle to come into contact with a leading end of paper to separate the paper from other paper. As such, the process can be practiced by another materially different apparatus. Also, the apparatus as claimed can be used to practice a process that does not detect the strengths of paper sheets when a printing command is input. Accordingly, the apparatus as claimed can be used to practice another and materially different process.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. If applicants elect to prosecute the claims directed to Group I of the instant application, election of a single disclosed species for prosecution on the merits is also required as set forth below.

5. This application contains claims directed to the following patentably distinct species of the claimed invention:

Species I, Figures 2-5; and

Species II, Figures 6-9.

Applicants are required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-3, 7-8, 12-15, 17-19 and 23 appear to be generic.

Applicants are advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicants will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicants must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicants traverse on the ground that the species are not patentably distinct, applicants should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
